

East West University
Department of Computer Science and Engineering
Course: CSE412- Software Engineering
Summer 2025

Lab Work -03

Preparing a Repository

1. This section builds upon the previous task.
2. Users will have the ability to create multiple folders, allowing them to organize their uploaded files according to their preferences.
3. If a user does not create specific folders for their uploads, all files will automatically be saved in a designated root or default folder, which may lead to cluttered storage.
4. To maintain organization and clarity, folders or files with identical names will not be permitted; unique naming is essential to avoid any confusion.
5. Additionally, users will have the capability to rename their folders or files, providing flexibility in how they manage their stored content.
